                                                                                       SC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       corresponding to the overlapping clone, as we submit sequence with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13

Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrl3

This sequence is the entire insert of clone Rp11-155N3 The true left end of clone Rp11-318G11 is at 114983 in this sequence. The true right end of clone Rp11-56D6 is at 42341 in this sequence. The true right end of clone Rp11-55M18 is at 43464 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements, where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.

RP11-155N3 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see

http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

On Oct 1, 2000 this sequence version replaced gi:10039689.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission variation annotation may not be found in the sequence submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_Gents is a 'working draft' sequence. It currently ists of 75 contigs. The true order of the pieces not known and their order in this sequence record is trary. Gaps between the contigs are represented as of N, but the exact sizes of the gaps are unknown as record will be updated with the finished sequence soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     re
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     er
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ut the will as it is rved.

L Submitted (09-JUL-2002) 1, D-85764 Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by AGOWA (Berlin/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKFZp66701117) is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is availa
at http://mips.gsf.de/proj/cDNA/.

                                                                                                                                                                                                                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, cantianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the immune response in a subject by interfering with the cability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an immune response in a subject may also be inhibited by administering an immune response an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat chypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit consideration and differentiation of cells involved in an inflammatory cresponse e,g, arthritis, inflammatory bowel disease and increase canemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, cremematorid arthritis, endometriosis and pregnancy induced hypertension. The present sequence encodes human CLASP-2, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                        Query Ma

antibody who proteins and mediated dis

antianaemic, haemostatic and neuroprotective activities with the used to inhibit an immune response in a subject by interfering with the ability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat

The present invention describes caumerin time asymmunomodulatory, (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be antianaemic, haemostatic and neuroprotective activities.
